Client/Server

.order Functions

- Products and Services Inquiry and Search
- Ship-to Address Inquiry
- Enables Add to Shopping Cart links on all inquiry drill-downs and Products and Services Inquiry Item Detail Page
- Shopping Cart Inquiry
- Shopping Cart Submission
- E-mail Notifications

As the Internet becomes the method of choice for transacting business worldwide, an ever-increasing number of your customers will demand the ability to place orders for products and services online. The .order applet for the e-Business Manager module brings this functionality to Sage's Management Accounting Series (MAS) software.

The .order applet provides a business-to-business solution that offers your existing customers the ability to place orders directly into your MAS system through your Web site whenever they desire. The integration of the .order applet into your MAS accounting system through e-Business Manager represents a vast leap forward in the level of customer service your company can provide. The implementation of .order can increase the accuracy of orders placed into your system, and can reduce operating expenses by allowing the customer to place their own orders without administrative and sales support.

The .order applet includes many powerful standard features that can provide you with great benefits at a very affordable price.

Designed for use in conjunction with the MAS e-Business Manager module.

See reverse side for list of features

FEATURES

Products and Services Inquiry

The products and services Web pages provide the ability to view the items available for purchase in a collapsing tree view of categories. These categories makes it easy for your customer to find items without having to know the actual item number. Upon selection of an individual item, it displays the image associated with the item (along with the price and description), and the ability to add the item to the shopping cart. The page automatically displays any special customer pricing and/or quantity break pricing you have set up in MAS.

Products Search

On the Products and Services Inquiry page, the product search feature can also find items. This allows your customers to search by item number, item description or customer item number. Search options give the ability to search by the criteria “begins with,” “contains” or “ends with.”

Ship-to Inquiry

When creating a shopping cart order, your customer can view existing ship-to addresses for their company and select the correct address for this order. They can also request a new ship-to address. To keep your security intact, the MAS e-Business Manager administrator must accept any new ship-to address before it can be put to use.

Display Shopping Cart

After adding items to the shopping cart, either from the Products and Services Inquiry or from any of the drill-downs in .inquiry, selecting “View Shopping Cart” displays the selected items with quantities, prices, billing and shipping addresses, sales tax, and freight information.

Submit Shopping Cart

Pressing the “Accept” button displays a confirmation page. This performs credit limit checking and a customer on-hold verification process. A link is available to select a different ship-to code or view sales tax detail.

E-mail Notifications

Decide to send e-mail notifications to the customer, salesperson, and a user of your choice whenever:

- Your customer successfully submits a shopping cart
- You accept or reject an Internet order
- You ship an Internet order
